

CoinTrack SA

This is an Android application that helps users track their expenses, manage budgets by category, set monthly spending goals and persist all data locally using Room Database. The app includes photo attachment support for expense entries and provides insightful summaries of spending by category.

Features

User Authentication

- Users must log in with a username and password
- Simple credential validation

Category Management

- Create, edit, and delete categories
- Each expense entry must belong to one category.

Expense Entry

- Add an expense with the following fields:
 - Date
 - Start time and End time
 - Description
 - Category
 - Amount spent
 - Optionally (attach a photograph to the expense entry.

Monthly Spending Goals

- Set a minimum monthly spending goal.
- Set a maximum monthly spending goal.
- Track progress against both goals within a selected month.

Expense List

- View all expense entries within a user-selectable date period according to custom range
- If an expense has an attached photo, the user can view or open it directly from the list.

Spending Summary By Category

- View total amount spent per category over a user-selectable date period.
- Helps identify spending patterns and budget violations.

###Local Data Persistence

- All data (users, categories, expenses, photos) is stored locally using Room Database
- No internet connection required after installation.

##Sample User Flow

- 1.Login with credentials e.g. username or password
- 2.Create a category e.g. Groceries, Transport, Entertainment.
- 3.Set monthly goals e.g., minimum amount or maximum amount
- 4.Add an expense – choose category, fill in date, times, description, amount, and optionally take/attach a photo.
- 5.View expense list – filter by "This Month" to see all entries; tap photo icon to view image.
- 6.View spending summary– select date range to see total spent per category.

Prerequisites

- Android Studio Hedgehog | 2023.3.1 or later
- Minimum SDK: 24 (Android 7.0)
- Target SDK: 34 (Android 14)

Installation

1. Clone the repository:

```
``bash
```

```
git clone https://github.com/MatlokweGosego/coin\_track\_sa
```
